## Abstracts

Digital Core Banking Solution is a comprehensive software platform built on a modern IT architecture, centered on customer experience, and supporting the full digital transformation of banks. It adopts a modular, API-based microservice design, replacing traditional monolithic core systems to decouple and agilely restructure business functions (such as deposits, loans, payments, and accounting). Its core capabilities include: supporting massive, high-frequency transactions; providing 24/7 uninterrupted service; rapidly connecting to ecosystem scenarios through open banking interfaces; leveraging a data platform to empower real-time risk control and intelligent marketing; and possessing high scalability and elasticity to respond agilely to market changes and innovative demands. This solution is a key technological engine for banks to achieve online business operations, data-driven operations, and an ecosystem-based service ecosystem. Digital Core Banking Solution has a complex cost structure. Initially, it primarily involves high R&D investment and implementation costs (consulting, customization, data migration). Once operational, the costs shift to ongoing cloud resource fees and maintenance support. Its gross profit margin is typically polarized: standardized SaaS products or modular services have higher gross profit margins (up to 60-80%), while highly customized large-scale banking projects have significantly lower gross profit margins (often 30-50% or lower) due to substantial labor costs and integration expenses. Economies of scale, product standardization, and customer renewal rates are key factors influencing its long-term gross profit margin. The development of global Digital Core Banking Solution exhibits significant regional characteristics and divergent development paths. In North America and Europe, the market is driven by a mature fintech ecosystem, stringent regulations, and the pressure of aging traditional systems, with modular upgrades, cloud-native reconstruction, and open banking as the mainstream approaches. Competition among large vendors and emerging cloud services is fierce. The Asia-Pacific region (excluding Japan) is the

fastest-growing market, particularly China, India, and Southeast Asia. This growth is driven by a large unbanked/low-bank population, widespread mobile internet adoption, and proactive regulatory policies, resulting in a plethora of lightweight, cost-effective solutions tailored for digital banks and SMEs. Chinese vendors have also established leading practices in distributed architecture and high-concurrency processing. Other emerging markets are in earlier stages of system modernization or initial digitization. The global trend is shifting from single-system replacement to the construction of a continuously evolving platform ecosystem driven by cloud, APIs, and AI.

The global Digital Core Banking Solution market size was estimated at USD 645.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
