Abstracts

Digital cytology refers to the application of digital imaging and artificial intelligence (AI) technologies to the field of cytopathology, enabling the digitization, analysis, storage, and sharing of cellular samples for diagnostic purposes. Traditional microscope-based cytology slides are scanned into high-resolution digital images using whole-slide imaging (WSI) systems, which can then be interpreted remotely or analyzed by AI algorithms to detect abnormalities such as cancerous cells. Digital cytology enhances diagnostic accuracy, workflow efficiency, and access to expert review, making it particularly useful in telepathology and large-scale screening programs.

The global Digital Cytology market size was estimated at USD 574.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.00% during the forecast period.
