Report Overview:

Digital dentistry software refers to computerized systems and related technologies used in dental practice to assist in diagnosis, treatment planning, surgical guidance, and patient records management.

Some digital dentistry software can generate a three-dimensional (3D) model of a patient's mouth and teeth using computer-aided design (CAD) and computer-aided manufacturing (CAM) techniques. This 3D model can help dentists better understand the condition of the patient's teeth and jaw structure and facilitate more accurate treatment planning.

Other digital dentistry software can be used for oral surgery guidance, including virtual dental implant planning, computer-guided endodontic surgery, and computer-guided oral surgery. This type of software allows dentists to simulate the surgical procedure in advance and achieve more accurate and reliable results during the actual operation.

The Global Digital Dentistry Software Market Size was estimated at USD 5429.39 million in 2023 and is projected to reach USD 9514.04 million by 2029, exhibiting a CAGR of 9.80% during the forecast period.
