Report Overview

Differential Pressure Sensors measure the difference between two pressures, one connected to each side of the sensor. Differential pressure sensors are used to measure many properties, such as pressure drops across oil filters or air filters, fluid levels (by comparing the pressure above and below the liquid) or flow rates (by measuring the change in pressure across a restriction). Technically speaking, most pressure sensors are really differential pressure sensors; for example a gauge pressure sensor is merely a differential pressure sensor in which one side is open to the ambient atmosphere.

The global Digital Differential Pressure Sensors market size was estimated at USD 613.40 million in 2023 and is projected to reach USD 814.44 million by 2032, exhibiting a CAGR of 3.20% during the forecast period.

North America Digital Differential Pressure Sensors market size was estimated at USD 168.72 million in 2023, at a CAGR of 2.74% during the forecast period of 2024 through 2032.
