Report Overview

The digital dose inhaler is an advanced medical device designed to deliver precise doses of medication to patients with respiratory conditions such as asthma and chronic obstructive pulmonary disease (COPD). Unlike traditional inhalers, it incorporates digital technology?such as sensors, Bluetooth connectivity, and companion mobile apps?to track usage, monitor adherence, and provide real-time feedback to both patients and healthcare providers. These devices improve treatment efficacy by ensuring correct dosage and timing while reducing human error. Some models also feature geofencing, reminders, and data analytics to enhance disease management. The integration of IoT (Internet of Things) and AI-driven insights positions digital dose inhalers as a key innovation in respiratory care, bridging the gap between medication delivery and digital health monitoring.
