Abstracts

Digital farming software can integrate financial and field records for farmers using technology for complete farm activity management. It can analyze data from each plot to provide information on soil, weather, crop growth patterns, and provide actionable geographic-relevant timely insights to prevent losses and optimize the productivity of each plot on the farm. Farmers can even directly address their queries and manage the supply chain through software on their mobile phones. Provide comprehensive service support for agricultural production, including the acquisition of agricultural information, management of agricultural production, sales of agricultural products, etc., to help farmers improve agricultural production efficiency and the quality of agricultural products. With the advancement of China's agricultural modernization, the scale of the digital agricultural software market is also expanding. However, the current share of China's digital agricultural software market in the world still needs to be further improved, and it has great development potential. This type of software can help farmers with planting planning, soil monitoring, crop growth monitoring, pest and disease control, etc., provide farmers with accurate irrigation and fertilization suggestions, and improve the yield and quality of crops. The global digital agricultural software market is highly competitive, and companies have strong technical strength and market share in the fields of precision agriculture and agricultural management software. Some European companies, such as Germany's Lemken, also occupy a certain position in the agricultural software market. The competition pattern of China's digital agricultural software market is relatively scattered. There are some technology companies focusing on the agricultural field, such as GAGO Inc., which have certain technical advantages in agricultural data analysis and planting management. At the same time, some large agricultural enterprises and Internet companies have also begun to get involved in the field of agricultural software, such as the MAP smart agriculture platform launched by Sinochem Agriculture. In the future, agricultural software will pay

more attention to integration and platformization, integrating software for various links such as planting management, breeding management, and agricultural product sales onto one platform, realizing the full process management and data sharing of agricultural production, and improving the efficiency and management level of agricultural production.

The global Digital Farming Software market size was estimated at USD 6123.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
