Report Overview
A meat thermometer is a thermometer used to measure the internal temperature of meat, especially roasts and steaks, and other cooked foods. The degree of 'doneness' of meat correlates closely with the internal temperature, so that a thermometer reading indicates when it is cooked as desired. When cooking, food should always be cooked so that the interior reaches a temperature sufficient, that in the case of meat is enough to kill pathogens that may cause foodborne illness?
A barbecue thermometer is used to measure the temperature of meat. It has several probes that can be inserted into the meat to show the temperature of the meat. You can set up different barbecue modes according to different meats, choose rare, medium or well cooked, and some meat thermometers can be connected to your mobile phone via bluetooth, and the temperature can be set and displayed remotely.
