Abstracts

A digital microscope is a variation of a traditional optical microscope that uses optics and a digital camera to output an image to a monitor, sometimes by means of software running on a computer. A digital microscope often has its own in-built LED light source, and differs from an optical microscope in that there is no provision to observe the sample directly through an eyepiece. Since the image is focussed on the digital circuit the entire system is designed for the monitor image. The optics for the human eye are omitted.

The global Digital Microscope market size was estimated at USD 403.21 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
