The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Digital Oral Impression Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Digital Oral Impression Machine is a medical device that captures three-dimensional (3D) digital images of the intraoral structures—such as teeth, gums, and occlusion—using optical scanning technology. Replacing traditional physical impression materials like silicone, these devices typically include a handheld scanner, image processing software, and a digital display unit. Utilizing structured light, laser, or infrared technology, they generate accurate digital impressions in real time.
