Abstracts

Digital printing films are specialized substrates designed for use in large-format inkjet printing, consisting of a base material—commonly vinyl, polyester, or polyethylene—coated with an ink-receptive layer optimized for pigment or dye-based inks, enabling high-resolution graphics, vibrant colors, and durability for applications such as advertising banners, vehicle wraps, window graphics, and point-of-purchase displays. These films vary by adhesive properties (e.g., permanent, removable, or non-adhesive), finish (gloss, matte, or transparent), and performance characteristics (e.g., weather resistance, conformability, or recyclability), tailored to specific end-use environments and printing technologies, including eco-solvent, latex, UV-curable, and aqueous ink systems.
