Abstracts

Digital Spare Parts Catalog Software is an advanced digital management tool that visualizes, manages, and interacts with complex equipment or product components. Its core is to create a digital twin that fully corresponds to the physical entity. Users can intuitively view the internal structure, assembly relationships, and part details of the equipment from any angle through operations such as rotation, scaling, and decomposition (exploded view). This software is widely used in high-end equipment manufacturing, aerospace, automotive after-sales service, and large-scale facility operation and maintenance. By providing an immersive interactive experience, it significantly optimizes spare parts query, procurement, training, and maintenance guidance processes, making it a key tool for enterprises to achieve digital transformation and intelligent services.

Analysis and Summary of Global Regional Development of 3D Parts Catalog Software:The global 3D Parts Catalog Software market is closely tied to the region's industrialization progress, technology adoption, and high-end manufacturing base, exhibiting significant regional variations.
