## Abstracts

Digital Twins as a Service (DTaaS) is an emerging trend where third-party providers offer digital twin solutions as a service. DTaaS eliminates the need for organizations to build and maintain their own digital twin infrastructure, reducing upfront costs and technical complexities. These providers offer pre-built digital twin templates or platforms that can be customized to specific industry needs, allowing organizations to quickly adopt and benefit from digital twin technology. DTaaS offerings typically include data integration, analytics capabilities, visualization tools, and scalability options. By leveraging DTaaS, organizations can access the benefits of digital twins without the need for extensive in-house resources or expertise. This trend is particularly beneficial for small and medium-sized businesses that may have limited resources or expertise to build and manage their own digital twin infrastructure. Additionally, DTaaS allows organizations to focus on their core competencies while relying on specialized providers to handle the technical aspects of implementing and maintaining digital twin solutions. PTC Inc. launched an innovative DTaaS solution tailored for manufacturing companies. This new offering incorporated advanced simulation and modeling capabilities, empowering manufacturers to optimize production processes and improve operational efficiency. In November 2023, Microsoft acquired a startup specializing in digital twin technology. This acquisition reinforced Microsoft's commitment to providing comprehensive DTaaS solutions on its Azure cloud platform, catering to diverse industry verticals.

The global Digital Twins as a Service (DTaaS) market size was estimated at USD 415.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
