The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Video Dongle competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of Video Dongle reached approximately 7.1 million units, with an average market price of about USD 21. A video dongle is a compact device that typically connects via USB, HDMI, or USB-C ports to televisions, projectors, or monitors, enabling the projection of content from smartphones, tablets, or laptops onto larger screens. These devices are widely used in home entertainment, conference presentations, and educational training scenarios, allowing real-time transmission of video, audio, and application content from mobile devices to larger display equipment. The advantages of video dongles lie in their portability, ease of use, and the lack of complex installation requirements; users can simply plug the device into the corresponding port of a television or monitor to achieve screen sharing or content casting. With the proliferation of smart devices and the development of wireless screen mirroring technologies, video dongles have become an essential bridge connecting mobile devices with large-screen displays, meeting users' demands for a larger screen experience.

The global Video Dongle market size was estimated at USD 149.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
