Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Digital Video Laryngoscope competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A digital video laryngoscope is an advanced medical device used in airway management, particularly for performing endotracheal intubation. Unlike traditional laryngoscopes, which rely on direct line-of-sight visualization, a digital video laryngoscope uses a camera system to capture and display a clear image of the airway, including the vocal cords, on a monitor. This improves visibility and accuracy during intubation, especially in challenging airway cases. Digital video laryngoscopes are rapidly gaining popularity in emergency rooms, operating rooms, intensive care units, and pre-hospital settings. Post-COVID-19, demand for visualization devices for airway management has increased significantly, driving market growth. Technological trends include high-definition cameras, miniaturized probes, wireless transmission, and integration with electronic medical records systems. Developed markets are characterized by high-end product and brand concentration, while emerging markets offer significant growth potential. Disposable or replaceable blade designs are becoming mainstream to meet infection control and operational safety requirements.

The global Digital Video Laryngoscope market size was estimated at USD 770.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
