Abstracts

In 2024, global Digitally Printed Soft Signage production reached approximately 464.71 million units, with an average global market price of around US\$ 8.5 per unit. Digitally Printed Soft Signage refers to signage materials that are printed using digital printing technology and are made from flexible, non-rigid substrates. These signs are characterized by their ability to conform to various shapes and surfaces, making them versatile for a wide range of applications. Digitally printed soft signage can include materials such as vinyl, fabric, or other flexible plastics, which are then printed with high-resolution graphics, text, and images using digital printers. This type of signage is often used for indoor and outdoor advertising, retail displays, event signage, and other promotional purposes due to its eye-catching visuals and cost-effectiveness compared to traditional sign-making methods. The digital printing process allows for customization and short-run production, making it ideal for personalized and time-sensitive signage needs. The demand for digitally printed soft signage is driven by the shift from rigid substrates to lightweight and reusable textile-based solutions. Sustainability trends are pushing the adoption of recyclable polyester fabrics and water-based inks. Retail, trade shows, and events remain the largest application segments for soft signage globally. Dye-sublimation printing is gaining market share due to its vibrant color reproduction and fabric compatibility. Asia-Pacific is the fastest-growing region, led by China's textile printing capacity and cost advantages.

The global Digitally Printed Soft Signage market size was estimated at USD 3950.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
