Abstracts

Dimethyl ether (DME) is a clean energy source and as it generates no sulfur oxide or soot during combustion, its environmental impact is low. Owing to its non-toxicity and easy liquefaction properties, DME is easy to handle and therefore can be used as a domestic-sector fuel (substitute for LPG), transportation fuel (diesel vehicles, fuel cell vehicles), power plant fuel (thermal plants, cogeneration plants, stationary fuel cells), and as a raw material for chemical products. Given the above-described superior properties, if DME were to become widely available in large volumes at a reasonable price, DME could be used as a fuel in a wide variety of fields.

The global Dimethyl Ether market size was estimated at USD 2182.7 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.02% during the forecast period.
