### Report Overview

LEDs are known for their low power consumption and high brightness. The brightness and energy consumption differs from the traditional tungsten filament bulb by more than 60%. By making dimming, it is possible to adjust the brightness of the light according to the customer's requirements, thereby affecting the light and darkness of the room, bringing out different indoor atmospheres, saving energy and reducing carbon emissions.

Dimmed lights mean a reduction in energy consumption and the best part is that you can use dimmable LED lamps within a non-dimmable circuit.
