Abstracts

Dimpleplasty, also known as dimple creation surgery, is a minimally invasive cosmetic procedure designed to create natural-looking dimples on the cheeks or chin through a small incision made inside the mouth, where the buccinator muscle is strategically sutured to the skin, resulting in a permanent or semi-permanent indentation that mimics naturally occurring dimples when the patient smiles or makes certain facial expressions. This elective surgery is primarily sought for aesthetic enhancement, with the goal of adding youthful charm or symmetry to the face, and it is typically performed under local anesthesia on an outpatient basis, appealing to individuals desiring a subtle yet distinctive facial feature without extensive downtime or visible scarring.
