Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on DIN 471 Elastic Retaining Ring competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. DIN 471 elastic retaining ring is an external retaining ring for shafts designed in accordance with German Industrial Standards (DIN). It is used to be fixedly installed in the shaft groove to prevent the displacement of axially moving parts (such as bearings, gears, pulleys, etc.). It is usually made of spring steel or stainless steel and has an open ring structure. During assembly, it is expanded and embedded in the shaft groove with special snap ring pliers. It is firmly installed and removable. DIN 471 elastic retaining ring has good elasticity and fatigue resistance. It is suitable for a variety of rotating or sliding components such as automotive transmission systems, industrial machinery, agricultural machinery and equipment, power tools, pump products and precision instruments. It is one of the most commonly used standard fastening elements in axial limit and quick assembly solutions. Its common specifications cover shaft diameters from 3mm to more than 300mm. The dimensional accuracy and groove depth fit must comply with DIN standards to ensure reliability and safety.

The global DIN 471 Elastic Retaining Ring market size was estimated at USD 457.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
