Report Overview

DIN rail mount time delay relay is an electrical device, usually used for delay switching or delay closing in control circuits. They are designed to be mounted on a DIN rail, so they are also called DIN rail time delay relays. The delay relay realizes the delay switch or close by controlling the timer in the circuit. In a circuit, when a trigger signal reaches the relay, the relay opens or closes the circuit. However, if you need to delay opening or closing a circuit after a period of time, then you need a time delay relay. DIN rail mounting delay relays are usually used in control systems that require time-delayed operations. For example, in automation systems, time-delay relays can be used to control the delay time of motor startup or shutdown to ensure the normal operation of the system and avoid damage to equipment.

The global Din Rail Mount Time Delay Relay market size was estimated at USD 287.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
