## Abstracts

A diode power meter is a radio frequency (RF) and microwave power measurement instrument designed based on the nonlinear characteristics of a diode. Its core function is to convert high-frequency or pulse power signals into measurable direct current (DC) or low-frequency voltage signals. The diode detector of a diode power meter usually uses a Schottky diode or a thermistor diode. During operation, a high-frequency or pulse power signal enters the diode through a matching network. The diode rectifies the high-frequency signal into a DC or low-frequency voltage. The voltage after detection is proportional to the input power, and the power value is indirectly obtained by measuring the voltage.

The global Diode Power Meter market size was estimated at USD 337.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Diode Power Meter market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
