Report Overview

The lifetime of a diode-pumped laser (DPAL) is limited by the reaction of the rubidium vapor with the glass envelope of the gain medium. A high transmittance coating that resists alkali damage and protects the glass of gain units in DPAL. Applying this coating to the optical window of DPAL will enhance the transmission of its input and output laser beams. The application of optical coatings to DPAL optical windows is relatively new to simulate expected optical performance at input pump and output laser power wavelengths using different combinations of thin film materials in DPAL.

The global Diode Pumped Laser Optics Coatings market size was estimated at USD 185.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
