The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dipotassium Glycyrrhizinate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Dipotassium Glycyrrhizinate (DPG) is a water-soluble salt derived from glycyrrhizic acid, a natural compound extracted from licorice root (*Glycyrrhiza glabra*). It is widely used in cosmetic, pharmaceutical, and personal care applications due to its anti-inflammatory, anti-allergic, anti-irritant, and skin-soothing properties. Chemically stable and non-toxic, DPG is particularly effective at modulating inflammatory responses and reducing redness or irritation, making it ideal for sensitive skin formulations. In cosmetics and skincare, it is commonly found in products like facial cleansers, sunscreens, serums, creams, and masks, especially those targeting eczema, acne, and rosacea. In pharmaceuticals and oral care, it is used in topical corticosteroids, throat lozenges, and toothpaste for its soothing and anti-ulcer activity. DPG is often preferred over raw licorice extracts due to its standardized composition, enhanced water solubility, and higher safety profile. The Dipotassium Glycyrrhizinate market is growing steadily, driven by consumer demand for natural, anti-inflammatory ingredients in skincare, oral care, and pharmaceuticals. Its ability to address redness, irritation, and allergic reactions makes it indispensable in modern formulations, especially as global consumers shift toward milder, more plant-based products. While challenges related to raw material supply persist, the market is likely to expand further as DPG finds new applications in clean beauty, therapeutic skincare, and wellness-driven product lines. The growth of the ?sensitive skin? and ?clean beauty? movements has significantly increased the demand for gentle, plant-derived actives like dipotassium glycyrrhizinate. Consumers increasingly seek products that avoid harsh chemicals and instead use natural, dermatologically safe ingredients. DPG?s ability to reduce

inflammation, inhibit histamine release, and calm irritation positions it as a go-to functional ingredient in both premium and mass-market skincare lines worldwide. With growing awareness around sun protection and skin barrier health, DPG is being used more frequently in sun care products for its ability to counteract UV-induced irritation and erythema. Additionally, it's gaining traction in post-laser and post-peel skincare for its calming effects on damaged or inflamed skin. The rise in cosmetic dermatology treatments is creating demand for adjunct ingredients like DPG that can accelerate skin recovery and improve user comfort. In the pharmaceutical sector, DPG is valued for its anti-ulcer, anti-cough, and anti-inflammatory properties. It is used in throat lozenges, syrups, and topical anti-inflammatory formulations. Its safety and natural origin support its use in pediatric and elderly populations. In oral care, DPG is incorporated into toothpaste and mouthwash products to reduce gum inflammation and enhance overall oral health, particularly in natural or herbal product lines. Asian markets, especially Japan, South Korea, and China, have long embraced licorice-based ingredients due to traditional herbal medicine roots. DPG continues to see widespread use in herbal and cosmeceutical products in these regions. In China, it is frequently used in whitening, acne control, and TCM-inspired personal care products. As K-beauty and J-beauty influence spreads globally, DPG is also finding new markets in Europe and North America. The core manufacturers of Dipotassium Glycyrrhizinate in the world include Xinjiang Tianshan Pharmaceutical, Nikko Chemicals and Fanzhi Pharmaceutical. The top three companies have a market share of about 48%.

The global Dipotassium Glycyrrhizinate market size was estimated at USD 49.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
