Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Dipped Yarns competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Dipped yarns are high-performance textile reinforcements made from industrial fibers such as polyester, nylon, or aramid, which are processed through twisting, RFL (resorcinol?formaldehyde?latex) dipping, and heat setting. These yarns offer excellent adhesion, fatigue resistance, and tensile strength, making them essential reinforcement materials for rubber products such as conveyor belts, V-belts, industrial hoses, and rubber tracks. As rubber products evolve toward higher strength and lightweight performance, dipped yarns are increasingly recognized as critical functional components.
