Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Direct-acting Pressure Relief Valve competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of direct-acting pressure relief valves reached 3.2 million units, with an average selling price of US\$120 per unit. Direct-acting pressure relief valves are safety valves that control opening and closing through direct force. They are widely used in pipeline systems to control pressure and prevent equipment damage caused by system overpressure. Their working principle is that when the system pressure exceeds a set value, the valve automatically opens to release pressure. They are commonly used in chemical, power, energy, and oil and gas industries. Their working pressure range is generally 0.1-50 MPa, suitable for liquids, gases, and steam. Upstream raw materials mainly include stainless steel, cast iron, and alloy steel, with major global suppliers including Baosteel, Hangzhou Steel, JFE, and DuPont. Downstream customers are mainly in the petrochemical, power plant, power station, and natural gas transportation industries. Total production capacity is 12 million units per year, with an industry average gross profit margin of 25%. In upstream material costs, stainless steel and alloy steel account for approximately 60%, cast iron and other metal materials account for 30%, and sealing and spring materials account for 10%. In terms of downstream consumption, the petrochemical industry accounts for 40%, the power industry for 35%, and the natural gas industry for 25%. Future development trends include advancements in materials technology for high-temperature and high-pressure environments, the application of intelligent pressure monitoring and remote control systems, and improvements in environmental protection and energy efficiency.

The global Direct-acting Pressure Relief Valve market size was estimated at USD 384.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
