Report Overview

Direct drive permanent magnet shaft generator belongs to the field of marine generators. The generator consists of a base, a stator and a rotor located inside the base. The base is fixed to the ship board through a steel plate base. The machine base itself adopts a water-cooling structure, the rotor surface is equipped with permanent magnet blocks, and the rotor shaft is connected to the engine through a diaphragm coupling. The electricity generated by the stator is supplied to the load on the ship through the frequency converter, which greatly improves the system efficiency, reduces the maintenance and repair intensity of workers, reduces the overall vibration, and protects both the generator bearings and the engine crankshaft.

The global Direct Drive Permanent Magnet Shaft Generator market size was estimated at USD 181 million in 2023 and is projected to reach USD 259.86 million by 2032, exhibiting a CAGR of 4.10% during the forecast period.
