Abstracts

Direct Drive Tube Axial Fans is a type of axial fan that realizes air transmission through a direct connection between the motor and the impeller (no belt, gear and other transmission devices). Its core feature is that the motor spindle and the impeller are coaxial rigid connection, and the gas flows in parallel direction along the axis, which has the advantages of compact structure, high energy efficiency and low maintenance cost. This type of fan usually uses a one-piece cylindrical housing design (that is, the "tube" structure), and the motor is built into the air duct to directly drive the impeller to rotate, avoiding the energy loss and regular maintenance needs of the traditional belt drive system.

The global Direct Drive Tube Axial Fans market size was estimated at USD 1178.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
