Report Overview:

A direct dye or substantive dye is a dye that adheres to its substrate, typically a textile, by non-ionic forces. The amount of this attraction is known as 'substantivity': the higher the substantivity the greater the attraction of the dye for the fiber. Substantive dyes work best on textiles with high contents of cellulose, such as cotton. In contrast to direct dyes, wool and leather goods are dyed by the process of ion exchange, exploiting the cationic nature of proteins near neutral pH. The development of substantive dyes helped make mordant dyes obsolete.

The Global Direct Dyes Market Size was estimated at USD 276.40 million in 2023 and is projected to reach USD 333.90 million by 2029, exhibiting a CAGR of 3.20% during the forecast period.
