Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Direct Fast Dyes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Direct fast dyes are a type of dye that can directly dye cellulose fibers (such as cotton and viscose) in a neutral or weakly alkaline medium without the aid of a mordant. Its core characteristic is excellent light fastness (usually above level 5), and resistance to UV degradation is achieved through molecular structure optimization (such as the introduction of urea groups, triazine rings, phthalocyanine structures, etc.). Representative products such as Direct Fast Black G (C.I. Direct Black 19) and Direct Fast Turquoise Blue GL (C.I. 74180) have excellent light fastness but low washing fastness.

The global Direct Fast Dyes market size was estimated at USD 341.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
