Abstracts

Direct Fed Microbials (DFMs), commonly referred to as probiotics for animals, are live microorganisms including bacteria such as *Lactobacillus*, *Bifidobacterium*, and *Enterococcus*, as well as yeasts like *Saccharomyces cerevisiae* that are intentionally added to animal feed to confer health benefits when administered in adequate amounts. These beneficial microbes function by modulating the gut microbiota, enhancing nutrient absorption, improving feed conversion efficiency, and supporting immune function, thereby promoting overall animal health, welfare, and productivity. DFMs are primarily utilized in livestock production such as for poultry, swine, cattle, and aquaculture to reduce the incidence of digestive disorders, decrease reliance on antibiotics, and address growing consumer and regulatory pressures for sustainable and antibiotic-free animal husbandry practices.

The global Direct Fed Microbial (Dfm) market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
