Abstracts

Direct Oral Anticoagulants (DOACs) are a class of prescription medications designed to prevent and treat blood clots by inhibiting specific clotting factors in the coagulation cascade, such as thrombin (factor IIa) or factor Xa, offering a more targeted mechanism of action compared to traditional anticoagulants like warfarin. These drugs, which include apixaban, rivaroxaban, dabigatran, and edoxaban, are characterized by their oral administration, predictable pharmacokinetics, and reduced need for routine monitoring, making them a convenient and effective option for conditions such as atrial fibrillation, venous thromboembolism, and post-surgical thromboprophylaxis. The market for DOACs has experienced significant growth due to their favorable safety profile, lower risk of dietary interactions, and decreasing reliance on frequent blood tests, positioning them as a preferred choice for both patients and healthcare providers in managing thromboembolic disorders.

The global Direct Oral Anticoagulant market size was estimated at USD 12840.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
