### Report Overview

Direct Part Marking is a process that allows users to mark a barcode directly on an item instead of printing the barcode on a label, such as plastic and metal. There are three main technologies available for DPM: laser etched marking, dot peening and ink jet printing, with the intent to create a permanent identifier for the item. The permanent nature of the marking, assures that the item can be identified throughout its full life-cycle during the supply chain, even while being exposed to harsh environmental conditions. Direct part marking (DPM) barcode scanners and mobile computers are equipped with imagers capable of reading barcodes that are etched or imprinted directly into the surface of materials such as plastic and metal.
