Report Overview

The direct-reading dust concentration meter is a portable instrument used to measure the dust concentration in the ambient air. It can directly display the mass concentration of total dust or respirable dust. The principle of the direct-reading dust concentration measuring instrument is to use the β -ray absorption method to calculate the dust concentration by measuring the degree of absorption of β -rays by dust particles in the air. Direct-reading dust concentration measuring instruments are mainly used in industrial and mining enterprises and other places where environmental dust needs to be measured, especially underground coal mines with the risk of coal dust and gas explosions. Because it is an intrinsically safe device, it can be used in flammable and explosive environments. environment.
