Abstracts

Direct thermal labels are pressure-sensitive adhesive labels that utilize a specialized heat-sensitive coating to produce images without the need for ink, toner, or ribbons; when passed through a thermal printhead, the coated surface reacts to heat by darkening in specific areas to create text, barcodes, or graphics, making them distinct from thermal transfer labels which require a ribbon. These labels are widely used in applications where print longevity is not the primary concern but cost-efficiency, simplicity, and speed are critical, such as shipping labels, receipts, wristbands, and compliance labeling in logistics, retail, healthcare, and manufacturing sectors.

The global Direct Thermal Labels market size was estimated at USD 3520.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
