## Abstracts

The results of these tests estimate your genetic risk of developing several common diseases, such as celiac disease, Parkinson disease, and Alzheimer disease. Some companies also include a person's carrier status for less common conditions, including cystic fibrosis and sickle cell disease. A carrier is someone who has one copy of a gene mutation that, when present in two copies, causes a genetic disorder. The Direct-to-Consumer Genetic Testing Market is driven by the increasing consumer interest in understanding their genetic heritage, health risks, and ancestry. These tests provide individuals with accessible insights into their DNA, empowering them to make informed decisions about their health and heritage. Additionally, the ease of ordering these tests online and receiving results at home has made genetic testing more convenient and popular. However, a key challenge for this market is the need to address privacy and security concerns related to sensitive genetic data. Ensuring that consumer data is protected and not misused is a critical challenge. Furthermore, interpreting complex genetic information accurately can be a hurdle, as consumers may not fully understand the results or the potential implications. Striking a balance between accessibility and providing comprehensive education and genetic counseling is essential for the responsible growth of the Direct-to-Consumer Genetic Testing Market.

The global Direct-to-consumer Disease Risk and Health DNA Test market size was estimated at USD 511.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.00% during the forecast period.
