Mobile phone direct connection to satellite means that mobile phones or handheld terminals do not need ground hotspots, base stations and other transfer equipment, and can directly connect to high-orbit or low-orbit satellites to achieve data transmission or communication. Compared with traditional satellite communication systems, direct to phone satellite service have small communication terminals, limited power and antenna size, so it is difficult to use the high-frequency spectrum (such as Ku and Ka bands) widely used in traditional satellite communications. Generally, the relatively low-frequency L-band and S-band are used.

The global Direct-to-phone Satellite Service market size was estimated at USD 286.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 56.00% during the forecast period.
