Abstracts

Directly compressible sugars are specialized excipients used in pharmaceutical manufacturing to enable the direct compression of tablets without requiring additional granulation or processing steps, thereby enhancing production efficiency and cost-effectiveness. These sugars, which typically include forms like spray-dried lactose, dextrose, and other agglomerated saccharides, are engineered to possess optimal flowability, compressibility, and binding properties, ensuring uniformity in tablet weight, hardness, and dissolution characteristics. They serve as both fillers and binders in formulations, reducing the complexity of tablet production while maintaining compliance with pharmacopeial standards for purity and performance.

The global Directly Compressible Sugars market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
