Abstracts

A disabled children stroller, also known as a pediatric special needs stroller, is a specialized mobility aid designed for children with physical, developmental, or medical conditions that prevent them from using standard strollers. These devices typically feature customized postural support systems, including adjustable headrests, harnesses, lateral supports, and reclining seating options to accommodate various positioning needs. They are engineered with enhanced durability, larger wheels for stability on uneven terrain, and often include compatibility with medical equipment such as oxygen tanks or feeding pumps. Unlike conventional strollers, these products prioritize safety, therapeutic positioning, and accessibility, serving as both a mobility solution and a tool to promote the child's comfort and participation in daily activities.
