Report Overview

Disc brakes (calipers) are one of the common braking systems in modern cars and other motor vehicles. Its working principle is to use the piston in the brake caliper to push the brake shoe and the brake disc to generate friction, and convert the kinetic energy of the wheel into heat energy, thereby slowing down or stopping the movement of the vehicle. Disc brakes are divided into two types: fixed calipers and floating calipers. The former has one or more pistons and the latter has only one piston. Both of them can effectively achieve braking. Compared with traditional drum brakes, disc brakes have better heat dissipation performance and better braking effect. It is one of the main braking systems on modern cars, providing important braking performance and safety guarantees for vehicles.
