Report Overview

Brake Disc is the component of a disc brake against which the brake pads are applied. The material is typically grey iron, a form of cast iron. The design of the disc varies somewhat. Some are simply solid, but others are hollowed out with fins or vanes joining together the disc's two contact surfaces (usually included as part of a casting process). The weight and power of the vehicle determines the need for ventilated discs. The 'ventilated' disc design helps to dissipate the generated heat and is commonly used on the more-heavily-loaded front discs.

The global Disc Brakes market size was estimated at USD 4966.80 million in 2023 and is projected to reach USD 10436.27 million by 2032, exhibiting a CAGR of 8.60% during the forecast period.
