Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Disc Continuous Drying Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Disc Continuous Drying Machine is a highly efficient and energy-saving indirect heating continuous drying equipment. It consists of multiple layers of horizontally rotating circular heating discs. Wet material is fed from the top and, driven by the screw rake arm, falls layer by layer, passing over the surface of each heating disc. Steam or thermal oil introduced into the discs provides indirect heat transfer, evaporating the moisture or solvent. The dried material is then continuously discharged from the bottom. This equipment features high thermal efficiency, stable operation, simple operation, low dust emissions, and a wide range of applications. It is widely used for continuous drying of powders, granules, or slurries in the chemical, pharmaceutical, food, and environmental protection industries. In 2024, the global production of disc continuous dryers will reach 35,460 units, with an average selling price of US\$19,580 per unit.

The global Disc Continuous Drying Machine market size was estimated at USD 694.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
