Abstracts

Disc-Shaped Microcarrier is a carrier specifically for animal cell adherent cell culture, providing a large adherent area for cell growth and achieving high-density cell culture. The material for adherent growth is composed of stable polyester fiber and nylon scaffold, which is made through welding, molding, cleaning, carrier treatment and other processes. Disks for Cell Culture can be used in single-use bags, shake flasks and other bioreactors. The disc-shaped microcarriers market is emerging as a promising segment in cell culture technologies, offering a practical solution for achieving high-density growth of adherent cells in scalable systems. Their unique geometry provides an expanded surface area while maintaining efficient mass transfer, making them well suited for applications in biopharmaceutical production, vaccine development, and regenerative medicine. With the growing demand for advanced therapies and large-scale biologics manufacturing, these carriers are gaining traction as a cost-effective and reliable alternative to traditional culture methods. Suppliers that focus on optimizing material properties, surface treatments, and compatibility with automated bioreactor platforms are expected to strengthen their competitive advantage in this evolving field.

The global Disc-Shaped Microcarriers market size was estimated at USD 68.28 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
