### Report Overview

The disc tool magazine is mainly used for turning parts with hole locations or complex shapes (such as shafts, gears, etc.) in various high-precision, small-sized and hard-to-reach areas. It sets the cutting time and feed amount of each milling cutter through the computer program by the CNC system, and runs automatically after being programmed into the processing program. The chain tool magazine is a type of tool magazine in CNC machine tools. It is also called a tool magazine car. It is an automatic tool changing equipment matched with CNC machine tools. It connects each tool position through a chain, uses a motor to control the chain transmission, and automatically completes tool replacement. The main part of the chain tool magazine is composed of the frame, chain plate and motor. In addition, compared with the disc tool magazine, the chain tool magazine has the advantage of large tool capacity. However, the chain structure of the traditional chain tool magazine results in poor mechanical rigidity and large transmission clearance, resulting in poor positioning accuracy of the tool magazine. In order to improve the positioning accuracy, a complex detection and control circuit is required to achieve fast and accurate positioning.

The global Disc Tool Magazine and Chain Tool Magazine market size was estimated at USD 528 million in 2023 and is projected to reach USD 940.68 million by 2030, exhibiting a CAGR of 8.60% during the forecast period.
