Abstracts

The die bonder is the core equipment of the die attach process in the packaging and testing process, and plays a vital role. It is responsible for accurately grabbing the chip on the cut wafer and placing it securely on the corresponding die flag position of the substrate, and achieving a firm bond between the chip and the substrate through silver glue (Epoxy). The die bonder, with its high-speed and high-precision performance, completes a series of key steps such as positioning, alignment, flip-chip and continuous mounting during the component placement process. The main types of die bonders are IC die bonders, discrete device die bonders, and LED die bonders. Discrete device die bonders are equipment specifically used for IGBT modules and silicon carbide power devices.

The global Discrete Device Die Bonder market size was estimated at USD 337.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
