Abstracts

Disinfection hand sanitizers are antiseptic solutions, typically alcohol-based formulations containing ethanol, isopropanol, or n-propanol in concentrations between 60?95%, designed to rapidly reduce or eliminate microbial populations on hands when soap and water are not readily available. These products function through the denaturation of proteins and disruption of microbial cell membranes, targeting bacteria, viruses, and fungi, and are commonly available in gel, foam, spray, or liquid forms, often enhanced with emollients like glycerin to mitigate skin dryness and other additives such as fragrances or aloe vera for user appeal. Their efficacy, portability, and ease of use have established them as essential personal hygiene products in healthcare settings, food handling, public spaces, and household environments, particularly emphasized during disease outbreaks and pandemics.

The global Disinfection Hand Sanitizers market size was estimated at USD 10833.33 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
