## Abstracts

Disinformation detection tools are software or systems that can help identify and distinguish false information. These tools usually use artificial intelligence, machine learning, natural language processing and other technologies to analyze large amounts of information and use a series of algorithms and models to determine whether a piece of information is true, accurate or misleading. The market for misinformation detection tools is currently in a phase of rapid growth, driven by strong demand for social governance, public opinion management, and brand reputation protection, as well as ongoing focus on misleading content, deepfakes, and automated moderation. Core capabilities lie in multimodal text and image analysis, cross-platform data integration, high-precision fact-checking and explainability, and adversarial detection and anti-tampering capabilities against generated content. The market landscape is dominated by large technology and media companies, while numerous startups in vertical sectors are also emerging.
