## Abstracts

An angiographic safety needle is a specialized medical device used during angiographic procedures to access blood vessels safely. Designed with a focus on minimizing the risk of injury, these needles typically feature safety mechanisms such as retractable tips or protective sheaths that automatically cover the needle after use. This design helps prevent accidental needle sticks, reducing the risk of exposure to bloodborne pathogens for healthcare workers. The angiographic safety needle is essential in procedures where precise vascular access is required for injecting contrast media or for catheter placement, ensuring both patient and clinician safety during the angiography process.
