Report Overview:

Disposable Aseptic Connector that have been widely used in bioprocessing. They are designed to make processing easier and reduce potential for products to become contaminated. A critical step, and risk, in the application of single-use components, is their final connection to form a usable assembly. Sterile connection is the critical "communication," or bridge, by which all the other pieces are made truly functional. Sterile connectors allow two lines of tubing to be joined while maintaining a sterile fluid pathway. Each line of tubing is pre-affixed to a connector end that has a removable membrane or valve barrier for mating to another connector end. Thus, the process line is maintained as closed and sterile even before a connection is made. Sterile connectors are designed to connect one processing stream to another, such as a container to a sampling line, media to a product vessel, or a filtration assembly to a filling line.
