Abstracts

Disposable baby bottles are single-use feeding containers designed for infants, typically constructed from pre-sterilized plastic with an integrated nipple and often sold with disposable liners or as entirely one-piece units to eliminate the need for washing or sanitizing between uses. These products are primarily marketed toward parents and caregivers seeking convenience, portability, and hygiene in situations where traditional reusable bottles are impractical?such as during travel, emergencies, or in healthcare settings. The market is driven by growing parental concerns over sanitation, busier lifestyles, and increased demand for on-the-go baby care solutions, though it also faces scrutiny regarding environmental impact due to plastic waste and questions about long-term cost-effectiveness compared to reusable alternatives.

The global Disposable Baby Bottles market size was estimated at USD 245.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
