Abstracts

The disposable bioreactor system is an innovative bioreactor used for cell culture and biopharmaceutical production. Its core feature is the use of disposable, disposable biocontainers (usually made of high-performance polymer materials) to replace traditional stainless steel or glass reactors. The system is widely used in biopharmaceuticals, vaccine production, gene therapy, and regenerative medicine. It has gradually become the mainstream choice for bioprocess development and production because of its advantages of reducing contamination risks, reducing cleaning and sterilization costs, and shortening production cycles. The disposable bioreactor system usually includes disposable culture bags, stirring systems, sensors, and control systems, and can be applied to different culture methods (such as rocking, stirring, and airlift). With the rise of personalized biopharmaceuticals and flexible manufacturing models, the system plays an important role in improving production efficiency, optimizing process development, and reducing capital investment.

The global Disposable Bioreactor System market size was estimated at USD 4516.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.10% during the forecast period.
